

Oxford Ethicon – Saturday 13th and Sunday 14th May 2017

Be part of our First Ever Ethicon!

This **two-day workshop** will see participants devise a prototype product that potentially impacts on our personal security. They will be asked to devise a **technological solution** which considers social, security and ethical themes around privacy, surveillance, collation, and self-incrimination.

Each team will be made up of two technical undergraduates (from computer science or a related discipline), plus two non-technical team members from areas such as social sciences, philosophy, business (and who have an interest in ethics) from any UK University.

You do not have to be part of a team to enter, we can construct teams for interested parties in advance.

Accommodation and travel bursaries are available, but preference will be given to those within a 30-mile radius.

The deadline for registrations is Friday 5th May. For an application form or more information please email:
